Abstract of JP10293688

PROBLEM TO BE SOLVED: To surely collect charge in accordance with the use of software by subtracting charging points that are recorded on a recording means on condition that a use executes the software and outputs the execution result. **SOLUTION:** Charging point controlling software compares in size an output point which is defined to an outputting form with a charging point P which is registered in a charging point recording part 6C of an information recording device 6 of a user's side terminal. In such cases, when the point P is more than the charging point, the software carries out an output. On the other hand, the point P is smaller than the output point, it returns to application software without allowing an output. Then, it confirms whether the output is effectively executed, and when it confirms that the output is effective, it records what subtracts an output point from the point P as a new charging point P on the device 6.
